PAGE, LETTER C.

12/9/69 OX: Compression fracture of D9 is unchanged. Calcification is beginning to be evident. I was somewhat surprised to observe that she was not wearing a back brace. She told me that Deon's could not fit her. She reported back to this office. I was not here. Since I had already given her the address of a brace maker in Salt Lake for Taylor back brace in the event that she could not be fit locally, she felt that she would obtain it. Unfortunately she has not yet to the present date.

EXAMINATION: Shows that she has no spasm. She has subjective improved comfort. The increased dorsal curve is unchanged.

RECOMMENDATION: I advised her to obtain the Taylor type of back brace as soon she reasonably can. She must rest about half an hour after each two hours that she is up as a protection to the back until she gets the brace and she should return here in about two months for review with x-ray. She asked me about a pain in both the right and left sides of her face. The area suggests trigeminal nerve area involvement, but it is mild and I deferred to Dr. Green who will be more skilled in referring her for this problem.

REPORT: By progress copy to Dr. Green.

N. K. Kezerian, M.D./kf

7/14/75 NOTE: Per signed release we send x-rays and copy of this history to Dr. Holbrook and Dr. Noonan of Salt Lake City.
